GRADUATE SOFTWARE ENGINEER | CLOUD & AI/ML

Software Engineering and Applied AI graduate (BSc Hons, 2:1) with hands-on experience designing, building and deploying cloud-native applications and AI services across the full development lifecycle — from REST API design in FastAPI to containerisation with Docker and deployment on AWS. Confident in Python with exposure to Java, JavaScript and SQL, and a strong interest in cloud platforms (AWS, Azure, GCP) and AI agents. Eager to learn on the job, collaborate with multidisciplinary teams, and deliver creative solutions for real-world clients.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript / TypeScript, SQL, C++

Cloud & DevOps: AWS, Docker, Git / GitHub, CI basics; interest in Azure, GCP & Terraform

Software Engineering: FastAPI, REST APIs, microservices basics, Streamlit, React

AI / Machine Learning: Machine Learning, Deep Learning, NLP, BERT, LLM APIs / AI agents, model evaluation, classification & regression

Databases & Tools: SQL, MongoDB, Postman, VS Code, Linux basics

PROJECTS

Portfolio AI Assistant — Cloud-Deployed AI Agent

- Designed and deployed an interactive AI agent on a live portfolio site that answers recruiter questions about my skills, projects and background in real time
- Integrated a large language model (Anthropic Claude API), supplying CV context so the agent responds accurately and conversationally
- Built the frontend in React and deployed live on Netlify with the API integration configured for production use

Resume Analytics Platform — NLP & Semantic Matching System

- Built an end-to-end system that matches and ranks CVs against job descriptions using semantic similarity
- Implemented an NLP pipeline for parsing and cleaning unstructured resume data; used BERT embeddings for similarity scoring, reaching 90%+ ranking accuracy
- Developed a REST API in FastAPI, containerised it with Docker, and built a Streamlit interface for user interaction

MediCheck — Medical ML Pipeline (FastAPI + Docker)

- Developed a machine learning pipeline for classifying and analysing medical datasets, served via a FastAPI REST API for real-time inference
- Containerised the application with Docker for deployment consistency and added logging and monitoring to track model performance

WORK EXPERIENCE

Software Engineer (Part-time) — Life Saver Training Institute

Dec 2024 – Sep 2025

- Developed and maintained frontend and backend components of the institute's web system, including booking forms and user-management pages
- Built and improved the training-session booking flow, strengthening form validation and resolving a bug that caused some bookings to fail to save to the database
- Supported API integration to connect backend data to the frontend, testing endpoints with Postman before deployment, using Git for version control, and reducing page load times by improving frontend rendering and API response handling

EDUCATION

BSc (Hons) Applied Computing & Artificial Intelligence — 2:1 (Upper Second Class)

Sep 2025 – May 2026

University of Hertfordshire, UK — One-year BSc top-up

Higher National Diploma (HND) in Information Technology

2023 – 2025

Sri Lanka Institute of Information Technology (SLIIT)

CERTIFICATIONS & CONTINUOUS LEARNING

- Machine Learning Specialisation — DeepLearning.AI (Andrew Ng); Deep Learning Specialisation (in progress)
- Building toward AWS certification through self-directed cloud and deployment projects

ADDITIONAL INFORMATION

Work Authorisation: UK Graduate visa (no sponsorship needed). **Languages:** English, Tamil. **Availability:** Immediate.
