PROFESSIONAL PROFILE

Ambitious and technically strong BSc Applied Computing & AI graduate with hands-on experience building, deploying, and optimising end-to-end machine learning systems. Proficient in Python, PyTorch, Scikit-learn, and FastAPI, with a strong foundation in deep learning, NLP, statistical modelling, and full-stack web development (MERN Stack). Passionate about applying cutting-edge AI and ML techniques to solve real-world problems. Completed the internationally recognised Machine Learning Specialisation by Andrew Ng and currently completing the Deep Learning Specialisation. Seeking a graduate ML / AI Engineer role to build intelligent, scalable, production-ready systems.

TECHNICAL SKILLS

ML / AI	PyTorch, Scikit-learn, BERT, NLP, Supervised & Unsupervised Learning, Neural Networks, Feature Engineering, Model Evaluation, Hyperparameter Tuning
Languages	Python, JavaScript, Java, C++, SQL
Data & Analysis	Pandas, NumPy, EDA, Statistical Modelling, Regression, Classification, Clustering, Embeddings, Semantic Similarity
Full Stack	MERN Stack (MongoDB, Express, React, Node.js), FastAPI, Streamlit, REST APIs
Databases	SQL, MongoDB, Relational Database Design, Data Querying & Manipulation
DevOps & Cloud	Docker, Git, GitHub, AWS, VS Code

WORK EXPERIENCE

Machine Learning / AI Engineer Habb Global, Sri Lanka	Dec 2024 – Sep 2025
- Developed and deployed end-to-end ML pipelines for classification, regression, and clustering tasks using Python, PyTorch, and Scikit-learn on real-world business datasets. - Built production-ready REST APIs using FastAPI to expose trained models for real-time inference, enabling seamless integration with business applications. - Performed full data lifecycle work — collection, cleaning, preprocessing, EDA, and feature engineering — to prepare high-quality datasets for modelling. - Applied hyperparameter tuning and cross-validation techniques to optimise model performance and generalisation on unseen data. - Containerised ML applications using Docker ensuring reproducible, consistent deployments across development and production environments. - Queried and managed structured and unstructured data using SQL and MongoDB; maintained logs and model outputs for monitoring and analysis. - Presented model results and data-driven insights to both technical and non-technical stakeholders, translating complex findings into clear business recommendations. - Collaborated within an Agile team — sprint planning, code reviews, and technical documentation using Git and GitHub.	

KEY PROJECTS

AI Resume Analytics System Personal Project	2025
---	------

- ▶ Built a full end-to-end AI-powered resume screening system that automatically ranks candidates by match quality against a job description — solving a real HR problem of 100+ manual reviews per role.
- ▶ Engineered a PDF/Word parsing pipeline to extract and clean unstructured resume text with robust error handling for inconsistent real-world formats.
- ▶ Implemented NLP-based skill and experience extraction using pattern recognition to identify structured information from messy documents.
- ▶ Applied BERT-based sentence embeddings and semantic similarity scoring to mathematically rank resume-to-job-description fit — achieving 90%+ accuracy for strong matches.
- ▶ Deployed a FastAPI backend and Streamlit web application, making the system accessible to non-technical HR users via a clean, intuitive interface.
- ▶ Deployed live to the web with clean, documented code on GitHub including README, architecture decisions, and performance benchmarks.

MediCheck – Medical Data ML Pipeline | [Personal Project](#)

2025

- ▶ Developed a full end-to-end ML pipeline using Python and PyTorch to classify and analyse medical data with production-grade reliability.
- ▶ Built a REST API with FastAPI for real-time model inference, containerised with Docker for consistent deployment across environments.
- ▶ Stored structured application logs and results in MongoDB, enabling model monitoring and performance tracking over time.

Predictive ML Models Suite | [Academic & Personal](#)

2025

- ▶ **Regression model using Scikit-learn with full feature engineering and EDA on real estate datasets, achieving strong predictive accuracy.** House Price Prediction:
- ▶ **End-to-end classification pipeline with data cleaning, model training, and evaluation metrics (accuracy, F1-score, AUC).** Customer Churn Prediction:
- ▶ **Binary classifier with hyperparameter tuning and cross-validation to maximise generalisation performance.** Loan Approval Classification:

CERTIFICATIONS

Machine Learning Specialisation | [DeepLearning.AI / Coursera \(Andrew Ng\)](#)

2025

- ▶ Completed the internationally recognised 3-course specialisation covering supervised learning, unsupervised learning, recommender systems, reinforcement learning, and ML best practices.

Deep Learning Specialisation (In Progress) | [DeepLearning.AI / Coursera \(Andrew Ng\)](#)

2025 – Present

- ▶ Currently completing 5-course specialisation covering neural networks, CNNs, RNNs, LSTMs, and transformer-based architectures including attention mechanisms.

EDUCATION

BSc (Hons) Applied Computing & Artificial Intelligence | [University of Hertfordshire](#)

2025 – 2026

- ▶ Key modules: Databases & SQL, Statistical Analysis, Machine Learning, Software Engineering, Data Structures & Algorithms, Probability & Statistics.

Higher National Diploma (HND) – Information Technology | [Sri Lanka Institute of Information Technology \(SLIIT\)](#)

2023 – 2025

- ▶ Modules included: Database Management Systems, Object Oriented Programming, Software Engineering, Computer Networks, Mobile Application Development.
- ▶ Graduated with Cumulative GPA: 2.50

ADDITIONAL INFORMATION

Right to Work:	Full right to work in the UK (Graduate Visa, valid 2 years) — no sponsorship required.
Languages:	English (Fluent), Tamil (Native)
Availability:	Available immediately for full-time roles.

Interests:
Development.

Artificial Intelligence, Large Language Models, MLOps, Open Source
